

RP-1200CSW

12" HIGH EXCURSION COMPACT SUBWOOFER

BIG BASS / SMALL SPACE

Klipsch Reference Premiere subwoofers are renowned for jaw-dropping, powerful bass. Now, maximum sound is attainable from even a modest footprint. Introducing Klipsch Reference Premiere Compact Subwoofers - three new high-performance models for all your movies, music, and games.

OVER 80 YEARS OF ADVANCED ACOUSTICS

Designed and engineered in the USA, we pour nearly a century of acoustic experience into Reference Premiere compact subwoofers. Featuring a sealed cabinet, a front-firing high-excursion Cerametallic™ woofer, an analog preamp, and a powerful class D amplifier - these subs deliver all the bass in half the space.

PACKED WITH TECH

Reference Premiere Compact Subs are replete with technology to allow full customization of your system's low-frequency sound, including a rear-mounted crossover selector, phase selector, and a volume selector that goes to 11 - all with high-contrast controls for visual acuity. The subwoofers include a line level/LFE (RCA) input, and a separate wireless input - usable simultaneously for multiple systems - for the ultimate low-frequency experience.

PREMIUM DESIGN

Scratch resistant ebony vinyl wraps the subwoofer's robust cabinetry to proudly display the iconic Reference Premiere copper styling. Rounded corners, shock-absorbing rubber feet, and a floating fabric grille ensures a premium aesthetic. A five-year warranty provides confidence for the long haul.

BETTER TOGETHER

Feel all the action! Klipsch Reference Premiere subwoofers are designed to work harmoniously with Klipsch loudspeakers. Add a sub to your home theater system or your stereo setup to gain over an entire octave of low frequency sound. Go wireless with the Klipsch WA-2 (sold separately) for even more placement options.
